|                                                                                                                                         |     |
|-----------------------------------------------------------------------------------------------------------------------------------------|-----|
| Preface .....                                                                                                                           | v   |
| Editor's Acknowledgments .....                                                                                                          | vii |
| Publisher's Acknowledgments .....                                                                                                       | ix  |
| <b>Part I—Issues in Causal Inference</b>                                                                                                |     |
| 1. Observation and Experiment<br>Austin Bradford Hill, 1953 .....                                                                       | 2   |
| 2. Statistical Relationships and Proof in Medicine<br>Jerome Cornfield, 1954 .....                                                      | 10  |
| 3. The Environment and Disease: Association or Causation?<br>Austin Bradford Hill, 1965 .....                                           | 14  |
| 4. "On the Methodology of Investigations of Etiologic Factors<br>in Chronic Disease"—Further Comments<br>Philip E. Sartwell, 1960 ..... | 21  |
| 5. Causes and Entities of Disease<br>Brian MacMahon and Thomas F. Pugh, 1967 .....                                                      | 25  |
| 6. Confounding and Effect Modification<br>Olli Miettinen, 1974 .....                                                                    | 34  |
| 7. Causes<br>Kenneth J. Rothman, 1976 .....                                                                                             | 39  |
| 8. A Series of Exchanges on Popperian Philosophy in Epidemiology .....                                                                  | 46  |
| Popper's Philosophy for Epidemiologists<br>Carol Buck, 1975 .....                                                                       | 47  |
| Replies by:                                                                                                                             |     |
| A. Michael Davies .....                                                                                                                 | 57  |
| Alwyn Smith .....                                                                                                                       | 59  |
| Andrew Creese .....                                                                                                                     | 61  |
| Richard Peto .....                                                                                                                      | 63  |
| Carol Buck .....                                                                                                                        | 63  |
| Against Popperized Epidemiology<br>M. Jacobsen, 1976 .....                                                                              | 65  |
| 9. Judgment and Causal Inference: Criteria in Epidemiologic Studies<br>Mervyn Susser, 1977 .....                                        | 68  |
| <b>Part II—Developments In Theory and Quantitative Methods</b>                                                                          |     |
| 1. Limitations of the Application of Fourfold Table Analysis to Hospital Data<br>Joseph Berkson, 1946 .....                             | 86  |
| 2. A Method of Estimating Comparative Rates from Clinical Data<br>Jerome Cornfield, 1951 .....                                          | 94  |
| 3. The Interpretation of Interaction in Contingency Tables<br>E. H. Simpson, 1951 .....                                                 | 102 |

|                                                                                                                                          |     |
|------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 4. On Estimating the Relation Between Blood Group and Disease<br>Barnet Woolf, 1955 .....                                                | 107 |
| 5. Statistical Aspects of the Analysis of Data from Retrospective Studies of Disease<br>Nathan Mantel and William Haenszel, 1959.....    | 111 |
| 6. Components of the Crude Risk Ratio<br>Olli S. Miettinen, 1972.....                                                                    | 142 |
| 7. Joint Dependence of Risk of Coronary Heart Disease on Serum Cholesterol<br>and Systolic Blood Pressure<br>Jerome Cornfield, 1962..... | 148 |
| 8. Hazards in the Use of the Logistic Function<br>Tavia Gordon, 1974.....                                                                | 153 |
| 9. Dynamic Risk Analysis in Retrospective Matched Pair Studies of Disease<br>Paul R. Sheehe, 1962 .....                                  | 160 |
| 10. Estimability and Estimation in Case-Referent Studies<br>Olli Miettinen, 1976 .....                                                   | 180 |
