
Introduction to the Cellular and Molecular Biology of Cancer

Edited by

L. M. FRANKS and N. M. TEICH

*Imperial Cancer Research Fund,
London*

Contents

Contributors	xi
1. What is cancer? <i>L. M. FRANKS</i>	1
2. The spread of tumours <i>I. R. HART</i>	27
3. Biology of human leukaemia <i>MELVYN E. GREAVES</i>	40
(4) Epidemiology of cancer <i>M. C. PIKE</i>	63
(5) Inherited susceptibility to cancer <i>W. F. BODMER</i>	93
6. Structure of DNA and its relationship to carcinogenesis <i>BEVERLY E. GRIFFIN</i>	111
7. Chemical carcinogenesis and precancer <i>CAROLINE WIGLEY</i>	131
8. Radiation carcinogenesis <i>G. E. ADAMS</i>	154
9. Viruses and cancer <i>J. A. WYKE</i>	176
(10) Oncogenes and cancer <i>NATALIE M. FEICH</i>	200
11. Chromosomes and cancer <i>D. SHEER</i>	229
(12) The role of growth factors in cancer <i>M. D. WATERFIELD</i>	251
13. Hormones and cancer <i>W. I. P. MAINWARING</i>	277

14. The neuroendocrine system and its tumours	306
<i>J. M. POLAK and S. R. BLOOM</i>	
15. Immunology of cancer	325
<i>PETER BEVERLEY</i>	
16. The local treatment of cancer	350
<i>I. S. FENTIMAN</i>	
17. Chemotherapy	363
<i>J. S. MALPAS</i>	
18. <i>Monoclonal antibodies and therapy</i>	378
<i>EDWARD J. WAWRZYNCZAK and</i> <i>PHILIP E. THORPE</i>	
19. Some conclusions and prospects	411
<i>ROBIN A. WEISS</i>
