Contents

Contents at a Glance	iv
Foreword	ix
About the Author.....	x
About the Technical Reviewers	xi
About the Game Graphics Designer	xii
Acknowledgments	xiii
Preface	xiv
 Part I: Planning and Creating 2D Games	 1
Chapter 1: Welcome to Android Gaming.....	3
Programming Android Games.....	4
Starting with a Good Story	5
Why Story Matters	6
Writing Your Story.....	7
The Road You'll Travel	10
Gathering Your Android Development Tools	10
Installing OpenGL ES.....	12
Choosing an Android Version	14
Summary	14
Chapter 2: <i>Star Fighter</i>: A 2-D Shooter	15
Telling the <i>Star Fighter</i> Story.....	15
What Makes a Game?	18
Understanding the Game Engine	18
Understanding Game-Specific Code	20
Exploring the <i>Star Fighter</i> Engine	23
Creating the <i>Star Fighter</i> Project	24
Summary	26
Chapter 3: Press Start: Making a Menu	27
Building the Splash Screen.....	27
Creating an Activity.....	28
Creating Your Splash Screen Image	35
Working with the R.java File	37

Creating a Layout File	38
Creating Fade Effects.....	45
Threading Your Game	48
Creating the Main Menu.....	54
Adding the Button Images	54
Setting the Layouts.....	56
Wiring the Buttons	58
Adding onClickListeners	60
Adding Music	61
Creating a Music Service	64
Playing Your Music	69
Summary	72
Chapter 4: Drawing The Environment.....	73
Rendering the Background	74
Creating the Creating the Creating the	75
Creating a Renderer	79
Loading an Image Using OpenGL	85
Scrolling the Background	97
Adding a Second Layer	104
Loading a Second Texture	106
Scrolling Layer Two	107
Working with the Matrices.....	109
Finishing the scrollBackground2() Method	111
Running at 60 Frames per Second	113
Pausing the Game Loop.....	114
Clearing the OpenGL Buffers.....	116
Modify the Main Menu	117
Summary	118
Chapter 5: Creating Your Character	119
Animating Sprites	119
Loading Your Character	122
Creating Texture Mapping Arrays	123
Loading a Texture onto Your Character	127
Setting Up the Game Loop	131
Moving the Character.....	132
Drawing the Default State of the Character	133
Coding the PLAYER_RELEASE Action.....	136
Moving the Character to the Left	138
Loading the Correct Sprite	140
Loading the Second Frame of Animation	143
Moving the Character to the Right.....	146
Loading the Right-Banking Animation	148
Moving Your Character Using a Touch Event.....	151
Parsing MotionEvent.....	152
Trapping ACTION_UP and ACTION_DOWN	154
Adjusting the FPS Delay.....	156
Summary	157

Chapter 6: Adding the Enemies	159
Midgame Housekeeping	159
Creating a Texture Class	160
Creating the Enemy Class	164
Adding a New Sprite Sheet	165
Creating the SFEnemy Class	166
The Bezier Curve	170
Summary	175
Chapter 7: Adding Basic Enemy Artificial Intelligence	177
Getting the Enemies Ready for AI	177
Creating Each Enemy's Logic	179
Initializing the Enemies	182
Loading the Sprite Sheet	183
Reviewing the AI	184
Creating the moveEnemy() Method	185
Creating an enemies[] Array Loop	185
Moving Each Enemy Using Its AI Logic	186
Creating the Interceptor AI	187
Adjusting the Vertices	188
Locking on to the Player's Position	189
Implementing a Slope Formula	191
Creating the Scout AI	198
Setting a Random Point to Move the Scout	199
Moving Along a Bezier Curve	201
Creating the Warship AI	203
Summary	205
Chapter 8: Defend Yourself!	207
Creating a Weapon Sprite Sheet	207
Creating a Weapon Class	209
Giving Your Weapon a Trajectory	211
Creating a Weapon Array	211
Adding a Second Sprite Sheet	212
Initializing the Weapons	213
Moving the Weapon Shots	214
Detecting the Edge of the Screen	215
Calling the firePlayerWeapons() Method	218
Implementing Collision Detection	219
Applying Collision Damage	219
Creating the detectCollisions() Method	220
Detecting the Specific Collisions	221
Removing Void Shots	222
Expanding on What You Learned	224
Summary	224
Reviewing the Key 2-D Code	225
Chapter 9: Publishing Your Game	243
Preparing Your Manifest	243
Preparing to Sign, Align, and Release	244
