

Recent Research Developments in

Chemical Physics

Vol. 4 (2003) Part II
Managing Editor: S.G. Pandalai

C o n t e n t s

Theoretical studies on superconductivity by using the mean-field approximation ————	395
<i>T. Yoshimoto, A. Sugiyama, K. Sugiyama, H. Nagao and K. Nishikawa</i>	
Photoionization-induced intraluster reactions ————	421
<i>J. Robb Grover and Edward A. Walters</i>	
Energy storage in lithium intercalation compounds of polyaromatic hydrocarbons studied by photoelectron spectroscopy ————	457
<i>Rainer Friedlein, Xavier Crispin and William R. Salaneck</i>	
Nonlinear optical spectroscopy of chiral molecules ————	487
<i>M.C. Schanne-Klein, H. Mesnil, T. Boulesteix and F. Hache</i>	
Study of condensed phase molecules and molecular synthesis in astrophysical environments ————	519
<i>Anita Dawes, Philip Holtom and Nigel J. Mason</i>	
The Stochastic Liouville equation approach combined with Brownian dynamic or molecular dynamic simulation techniques in studies of molecular dynamics and structure by spectroscopy ————	533
<i>Per-Olof Westlund, Pär Håkansson and Leif Persson</i>	
Theoretical X-ray photoelectron and Auger electron spectra of polymers by density functional theory calculations using model molecules ————	561
<i>Takao Otsuka, Kazunaka Endo and Delano P. Chong</i>	
Probing liquid surfaces using direct recoil and ion scattering spectrometries ————	595
<i>Philip R. Watson</i>	
Absolute and convective instabilities in the one-dimensional Brusselator model with flow ————	633
<i>P.V. Kuptsov, S.P. Kuznetsov, C. Knudsen and E. Mosekilde</i>
