

Thermal technologies in food processing

**Edited by
Philip Richardson**

Contents

<i>List of contributors</i>	ix
<i>List of notation</i>	xiii
1 Introduction	1
<i>P.S. Richardson, Campden & Chorleywood Food Research Association, Chipping Campden</i>	
Part I Conventional technologies	5
2 Retort technology	7
<i>N.S. May, Campden & Chorleywood Food Research Association, Chipping Campden</i>	
2.1 Introduction	7
2.2 The basic retort cycle	7
2.3 Selection of container	11
2.4 Selection of a retort	11
2.5 The influence of heating medium on retort performance	13
2.6 Future trends	25
2.7 Sources of further information and advice	27
2.8 References	27
3 Continuous heat processing	29
<i>S.P. Emond, Campden & Chorleywood Food Research Association, Chipping Campden</i>	
3.1 Introduction	29
3.2 Indirect heating	30
3.3 Direct heating	39

3.4	Holding section	42
3.5	Future trends	44
3.6	Sources of further information and advice	45
3.7	References	48
Part II Measurement and control		49
4	Pressure and temperature measurement in food process control	51
<i>P.G. Berrie, Endress+Hauser Process Solutions AG, Reinach</i>		
4.1	Introduction	51
4.2	Pressure measurement	52
4.3	Temperature measurement	57
4.4	General instrument design	68
4.5	References	73
5	Validation of heat processes	75
<i>G.S. Tucker, Campden & Chorleywood Food Research Association, Chipping Campden</i>		
5.1	Introduction: the need for better measurement and control ..	75
5.2	Validation methods: objectives and principles	76
5.3	Temperature distribution testing	79
5.4	Heat penetration testing	81
5.5	Microbiological spore methods	83
5.6	Biochemical time and temperature integrators	85
5.7	Future trends	87
5.8	Sources of further information and advice	88
5.9	References	89
6	Modelling and simulation of thermal processes	91
<i>B.M. Nicolai, P. Verboven and N. Scheerlinck, Katholieke Universiteit, Leuven</i>		
6.1	Introduction	91
6.2	Modelling of conduction heat transfer: the Fourier equation ..	92
6.3	The Navier–Stokes equations	93
6.4	Numerical methods	97
6.5	Applications	104
6.6	Conclusions	108
6.7	Acknowledgements	109
6.8	References	109
7	Modelling particular thermal technologies	113
<i>S. Bakalis, P.W. Cox and P.J. Fryer, University of Birmingham</i>		
7.1	Introduction	113
7.2	Processing of packed and solid foods	116
7.3	Continuous heating and cooling processes	122
7.4	Heat generation methods: ohmic and microwave heating	127
7.5	Developments in the field	131
7.6	References	133

8 Thermal processing and food quality: analysis and control	138
<i>A. Arnoldi, University of Milan</i>	
8.1 Introduction: the importance of thermal processing	138
8.2 The importance of the Maillard reaction	139
8.3 Thermal processing and food safety	142
8.4 Thermal processing and nutritional quality	143
8.5 Thermal processing, food flavour and colour	145
8.6 Maillard reaction and lipid oxidation	148
8.7 Controlling factors in the Maillard reaction	149
8.8 Methods of measurement	150
8.9 Application to the processing of particular foods	151
8.10 Future trends	153
8.11 Sources of further information and advice	154
8.12 References	154
Part III New thermal technologies	161
9 Radio frequency heating	163
<i>A.T. Rowley, EA Technology Ltd, Chester</i>	
9.1 Introduction	163
9.2 Basic principles of RF heating	163
9.3 Application to food processing	166
9.4 Advantages and disadvantages of RF heating	167
9.5 RF heating technologies	169
9.6 Case studies	173
9.7 Future trends in RF heating	175
9.8 Sources of further information and advice	176
9.9 Acknowledgements	177
9.10 References	177
10 Microwave processing	178
<i>M. Regier and H. Schubert, University of Karlsruhe</i>	
10.1 Introduction	178
10.2 Physical principles	180
10.3 Microwave applications	194
10.4 Modelling and verification	199
10.5 Summary and outlook	203
10.6 References	204
11 Infrared heating	208
<i>C. Skjöldebrand, ABB Automation Systems (formerly Swedish Institute of Food Research (SIK)), Tumba</i>	
11.1 Introduction; principle and uses	208
11.2 Theories and infrared properties	210
11.3 Technologies	215
11.4 Equipment	217

11.5	Applications: case studies and modelling	222
11.6	Future trends	225
11.7	References	227
12	Instant and high-heat infusion	229
	<i>J. Andersen, APV Systems, Silkeborg</i>	
12.1	Instant infusion: an introduction	229
12.2	Instant infusion in detail	230
12.3	Advantages and disadvantages of instant infusion	232
12.4	High-heat infusion: an introduction	234
12.5	The problem of heat resistant spores (HRS)	234
12.6	High-heat infusion in detail	235
12.7	Advantages and disadvantages of high-heat infusion	238
12.8	References	239
13	Ohmic heating	241
	<i>R. Ruan, X. Ye, P. Chen and C.J. Doona, University of Minnesota and I. Taub, US Army Natick Soldier Center</i>	
13.1	Introduction	241
13.2	Ohmic heating process and equipment	245
13.3	Monitoring and modeling of ohmic heating	247
13.4	Major challenges and needs for future research and development	260
13.5	References	264
14	Combined high pressure thermal treatment of foods	266
	<i>L. Ludikhuyze, A. Van Loey, Indrawati and M. Hendrickx, Katholieke Universiteit, Leuven</i>	
14.1	Introduction	266
14.2	Effect of high pressure on micro-organisms	267
14.3	Effect of high pressure on food quality related enzymes	268
14.4	Effect of high pressure on food structure and texture	271
14.5	Effect of high pressure on sensorial and nutritional properties of food	273
14.6	The use of integrated kinetic information in process design and optimization	275
14.7	High pressure processing technology and products	276
14.8	Conclusive remarks	278
14.9	Acknowledgement	278
14.10	References	278
