Preface to second edition	xiv
Preface to first edition	xv
1 Historical background	1
1.1 Introduction	1
1.2 Evolution of the process	1
1.3 Diversity of fermented milks	3
1.4 Patterns of consumption	5
1.5 Methods of production and classification	7
1.6 References	9
2 Background to manufacturing practice	11
2.1 Introduction	11
2.2 Preliminary treatment of the milk base	13
2.2.1 Milk as a raw material	14
2.2.2 Separation of cellular matter and other contaminants present in milk	16
2.2.3 Milk reception and storage	17
2.3 Standardisation of fat content in milk	17
2.4 Standardisation of the solids-not-fat content in milk	19
2.4.1 Traditional process	21
2.4.2 Addition of milk powder	22
2.4.3 Addition of buttermilk powder	23
2.4.4 Addition of whey powder and/or whey protein concentrates	24
2.4.5 Addition of casein powder	25
2.4.6 Concentration by vacuum evaporation (VE)	27
2.4.7 Concentration by membrane filtration	27
2.4.8 Addition of non-milk proteins	31
2.5 Addition of stabilisers/emulsifiers	35

2.5.1	General background	35
2.5.2	Miscellaneous properties and conditions	37
2.6	Addition of sweetening agents	41
2.6.1	General introduction	41
2.6.2	Types of carbohydrate sweetener	44
2.7	Addition of miscellaneous compounds	48
2.7.1	Penicillinase	48
2.7.2	Preservatives	50
2.7.3	Minerals, vitamins and/or fatty acids	53
2.8	Homogenisation	54
2.8.1	Effects on milk constituents	54
2.8.2	Aspects of processing	57
2.9	Heat treatment	61
2.9.1	Destruction of micro-organisms/pathogens	64
2.9.2	Production of stimulatory/inhibitory factors	64
2.9.3	Changes in the physicochemical properties of milk	66
2.9.4	Processing effects on the physical properties of the gel	71
2.10	Fermentation process	76
2.10.1	Introduction	76
2.10.2	Starter organisms	76
2.10.3	Gel formation	79
2.11	Cooling	82
2.11.1	One-phase cooling	82
2.11.2	Two-phase cooling	82
2.12	Addition of fruit/flavouring/colouring ingredients	83
2.12.1	Fruits	85
2.12.2	Flavouring agents	87
2.12.3	Colouring matter	90
2.13	Packaging	90
2.13.1	Introduction	90
2.13.2	Functions of packages	91
2.13.3	Types of packaging materials	93
2.13.4	Comparative studies on permeability of different yoghurt packages	98
2.13.5	Migration of monomers and other compounds	99
2.13.6	Tamper-evident packaging	100
2.13.7	Aluminium foil lids	101
2.13.8	Sterilisation of packaging materials	102
2.13.9	Outer or shipping container	103
2.14	Refrigerated cold storage, transport and distribution	105
2.14.1	The cold store	106
2.14.2	During transport	107
2.14.3	The retail shop and the consumer	107
2.15	Conclusion	108
2.16	References	108
3	Processing plants and equipment	129
3.1	Home or small-scale production	129

3.1.1	Miscellaneous systems	130
3.1.2	Packaging system	131
3.2	Medium-scale production	134
3.2.1	Hand operated vat	134
3.2.2	Multipurpose vat	134
3.2.3	Mini dairy	135
3.2.4	Small-scale packaging machines	136
3.3	Large-scale production	141
3.3.1	Milk reception, handling and storage	143
3.3.2	Standardisation of fat content in milk	143
3.3.3	Fortification of milk solids	147
3.3.4	Homogenisation	162
3.3.5	Heat treatment	165
3.3.6	Fermentation/incubation of the milk	173
3.3.7	Cooling	182
3.3.8	Pumps	186
3.3.9	Miscellaneous fittings	196
3.3.10	Fruit handling and mixing units	199
3.3.11	Filling machines	205
3.3.12	Miscellaneous handling, chill cooling and refrigerated cold storage	220
3.4	Mechanisation of yoghurt production and plant design	220
3.5	Continuous yoghurt production	225
3.5.1	Background	225
3.5.2	The NIZO process	226
3.5.3	Recent developments	228
3.6	Automation/process control	229
3.6.1	Levels of automation	229
3.6.2	Area/department 1	231
3.6.3	Area/department 2	232
3.6.4	Area/department 3	233
3.6.5	Area/department 4	233
3.6.6	Area/department 5	234
3.6.7	Area/department 6	236
3.6.8	Management information system	237
3.6.9	System architecture	237
3.6.10	System security	238
3.7	Building design, maintenance and services	240
3.7.1	General background and introduction	240
3.7.2	Location of a dairy plant	240
3.7.3	Layout of a dairy plant	242
3.7.4	Design and construction of dairy buildings	242
3.8	Conclusion	244
3.9	References	245
4	Plant cleaning, hygiene and effluent treatment	249
	Cleaning aspects	249
4.1	Primary objectives	249
4.2	Principles of the cleaning process	252

4.3	Factors involved in the selection and performance of a detergent	257
4.3.1	Type/range of detergents used in the yoghurt industry	257
4.3.2	Type of soiling matter	257
4.3.3	Water hardness and quality	258
4.3.4	Miscellaneous factors	260
4.4	Cleaning methods	260
4.4.1	Manual cleaning	261
4.4.2	Cleaning-in-place	261
4.4.3	Miscellaneous cleaning methods	264
4.5	Factors influencing the efficiency of cleaning	267
4.5.1	Type of soil	267
4.5.2	Method of cleaning adopted	267
4.5.3	Contact time	267
4.5.4	Concentration of detergent solution	267
4.5.5	Temperature	268
4.5.6	Flow rate or velocity	268
4.5.7	Acid wash	269
4.5.8	Plant design	270
4.5.9	Chemical composition of a detergent	271
4.6	Specific cleaning and sterilisation operations of yoghurt processing equipment and utensils	273
	Sterilisation aspects	286
4.7	Fundamentals of the sterilisation process	286
4.8	Methods of sterilisation and/or sanitation	287
4.8.1	Heat	287
4.8.2	Chemical agents	288
4.8.3	Filtration	291
4.8.4	Irradiation	291
4.8.5	Spraying, fogging or fumigation	291
4.9	Kinetics and mechanisms of microbial destruction	292
4.10	Means of assessing the sanitary condition of a processing plant	296
4.10.1	Physical examination	296
4.10.2	Chemical examination	297
4.10.3	Bacteriological examination	297
	Effluent treatment	298
4.11	Background	298
4.12	Nature of pollution	298
4.13	Methods of effluent treatment	299
4.14	References	302
5	Traditional and recent developments in yoghurt production and related products	306
5.1	Introduction	306
5.2	Standard commercial yoghurt	307
5.3	Yoghurt made from different mammalian milks	309
5.3.1	Goat's milk yoghurt	310

5.3.2	Sheep's milk yoghurt	312
5.3.3	Buffalo's milk yoghurt	313
5.3.4	Camel's milk yoghurt	316
5.4	Pasteurised/UHT/long-life/heat shock yoghurt	316
5.4.1	Technology of manufacture	317
5.4.2	Processing effects on properties of product	318
5.5	Drinking yoghurt	319
5.5.1	Background	319
5.5.2	Processing aspects	320
5.5.3	Other beverage products	323
5.5.4	Carbonated products	323
5.6	Lactose hydrolysed yoghurt (LHY)	324
5.7	Concentrated/strained yoghurt	326
5.7.1	Introduction and nomenclature	326
5.7.2	Processing methods	327
5.7.3	Miscellaneous properties	333
5.7.4	Microstructure	335
5.7.5	Related products	340
5.8	Frozen yoghurt	344
5.8.1	Background, standards and marketing	344
5.8.2	Technology of manufacture	345
5.8.3	Related products	348
5.9	Dried yoghurt	349
5.9.1	Introduction	349
5.9.2	Processing methods	350
5.9.3	Kishk and related products	353
5.10	Bio-yoghurt	358
5.11	Fat-substitutes yoghurt	359
5.12	Vegetable oil yoghurt	364
5.13	Chemically acidified yoghurt	366
5.14	Soy-milk yoghurt	366
5.15	Miscellaneous yoghurt products	369
5.16	Future developments and conclusion	370
5.17	References	371
6	Microbiology of yoghurt and "bio" starter cultures	389
6.1	Introduction	389
6.1.1	Historical background and classification	390
6.1.2	Modification of starter cultures	396
6.1.3	Potential genetic modifications	397
6.2	Characteristics of growth	398
6.2.1	Milk as a medium for microbial growth	398
6.2.2	Associative growth	399
6.3	Factors affecting slow growth of starter cultures	403
6.3.1	Compounds that are naturally present in milk	403
6.3.2	Effect of incubation temperature and inoculation rate	404
6.3.3	Mastitis milk and somatic cell count	405
6.3.4	Hydrogen peroxide (H ₂ O ₂)	405

6.3.5	Antibiotic residues	406
6.3.6	<i>Detergent and disinfectant residues</i>	408
6.3.7	Environmental pollution	411
6.3.8	Bacteriophages	411
6.3.9	Bacteriocins	418
6.3.10	Miscellaneous factors.....	418
6.4	Conclusion	422
6.5	References	423
7	Biochemistry of fermentation	432
7.1	Introduction	432
7.2	Carbohydrate metabolism	432
7.2.1	Homolactic fermentation	433
7.2.2	Heterolactic fermentation	435
7.2.3	Lactase activity	435
7.2.4	Production of lactic acid	437
7.2.5	Production of exopolysaccharide (EPS)	439
7.2.6	Production of flavour compounds	443
7.3	Protein metabolism	450
7.3.1	Constituent compounds of the milk protein molecule	451
7.3.2	Proteolytic enzymes	451
7.3.3	Proteolysis by the yoghurt and bio organisms	453
7.3.4	Products of proteolysis	460
7.4	Lipid/fat metabolism	463
7.4.1	Introduction	463
7.4.2	Changes in the level of free and esterified fatty acids	465
7.4.2	Changes in the level of volatile fatty acids	466
7.5	Vitamin metabolism	467
7.5.1	General background	467
7.5.2	Biosynthesis of folic acid	470
7.5.3	Biosynthesis of niacin	471
7.5.4	Biosynthesis of vitamin B ₆	472
7.6	Miscellaneous changes	473
7.7	References	475
8	Preservation and production of starter cultures	486
8.1	Introduction	486
8.2	Methods of starter culture preservation	487
8.2.1	Liquid starters	488
8.2.2	Dried starters	489
8.2.3	Frozen starters	495
8.3	Technology of cell biomass production	498
8.3.1	Growth characteristics	499
8.3.2	Concentration of cell biomass	499
8.4	Production systems for starter cultures	503
8.4.1	Introductory remarks	503
8.4.2	Simple microbiological techniques	504
8.4.3	Mechanically protected systems	504
8.4.4	pH control systems	510

8.4.5	Bacteriophage resistant/inhibitory medium (BRM/BIM)	510
8.5	Conclusion	511
8.6	References	511
9	Nutritional value of yoghurt	515
9.1	Introduction	515
9.2	Carbohydrates	516
9.2.1	Available carbohydrates	516
9.2.2	Unavailable carbohydrates	518
9.3	Protein	519
9.4	Lipids	520
9.5	Vitamins and minerals	521
9.6	Yoghurt and health	523
9.6.1	Therapeutic properties of yoghurt	524
9.6.2	Therapeutic properties of bio-yoghurt	528
9.7	Conclusion	530
9.8	References	531
10	Quality control in yoghurt manufacture	535
10.1	Introduction	535
10.2	Principles of HACCP	536
10.2.1	Brief introduction	536
10.2.2	Implementation of a HACCP system	538
10.3	Monitoring of process plant	541
10.4	Examination of raw materials	543
10.4.1	Liquid milk	543
10.4.2	Milk powder	545
10.4.3	Starter cultures for standard yoghurt	547
10.4.4	Starter cultures for bio-yoghurts	551
10.5	Quality appraisal of retail products	552
10.5.1	Analysis of chemical composition	552
10.5.2	Assessment of physical characteristics	556
10.5.3	Microbiological analysis	565
10.5.4	Assessment of organoleptic characteristics	572
10.6	Conclusion	578
10.7	References	578
Appendix I	Different ways in which titratable acidity is expressed and their relative values to % lactic acid	588
Appendix II	Temperature conversion	590
Appendix III	Volume units	593
Appendix IV	Weight/mass units	595
Appendix V	Miscellaneous units	596

Appendix VI	Work/energy and other related units	597
Appendix VII	Force and pressure units	599
Appendix VIII	Length and area units	600
Appendix IX	Pearson square method and algebraic methods	601
Index		606
